

Competitive business 100% biogas and biogas blended energy contracts?

Are you eager to reduce your business's carbon emissions from your gas consumption? Our Biogas range of products could be the solution for your business.

Taurus Renewable Energy & Taurus Utility Consultants are committed to offering low carbon products to support the production of cleaner energy and reduce global carbon emissions.

We offer four Biogas products to cater for all budgets. We also Compare the Commercial Biogas Market, so you don't have to. Biogas has a considerably smaller carbon footprint when compared to natural gas meaning a switch to biogas can help our planet. Our biogas products are below:

- Bio**100*** – 100% biogas
- Bio**50** (blend) – 50% biogas and 50% natural gas (carbon offset)
- Bio**25** (blend) – 25% biogas and 75% natural gas (carbon offset)
- Bio**10** (blend) – 10% biogas and 90% natural gas (carbon offset)

**The marginal scope 1 emissions produced from our Bio100 product are carbon offset*

For more information on biogas and natural gas emissions, please visit the **Greenhouse gas reporting: Conversion factors** on www.gov.uk [here](#)

Green Energy Quotes : Call [03302337999](tel:03302337999) or WhatsApp [07800762999](tel:07800762999)

Here are four reasons to choose one of our Suppliers Biogas products:

- **ALL OUR BIOGAS IS PRODUCED HERE IN THE UK SUPPORTING BRITISH JOBS**
- **FOR BLENDED PRODUCTS WITH AN ELEMENT OF CARBON OFFSETTING, WE HAND PICK CARBON OFFSETTING SCHEMES**
- **WE PROVIDE GREEN CERTIFICATES TO DISPLAY AT YOUR PREMISES**
- **WE HAVE BIOGAS PRODUCTS TO SUIT A RANGE OF BUDGETS**

What is biogas and how is it made?

- Biogas is produced through a process called anaerobic digestion (AD) whereby bacteria break down organic materials in an oxygen-free environment. Biogas can be used as a substitute for natural gas as it has the same characteristics and very similar specifications as natural gas (its fossil fuel equivalent).
- Biogas (sometimes referred to as “green gas”) is produced from a range of organic materials (feedstocks) including maize, rye, food residues and landfill materials. Once the Biogas has been produced, it is refined and can be injected into the gas network in much the same way as natural gas.
- There are currently 650 operational anaerobic digestion plants in the UK, which is a significant rise from one facility in 2013. This number, alongside the ambitions for net zero living by 2050, shows the UK’s ambition for Biogas to support the transition to clean energy.

NEW Bio10 for your business

Bio10 was introduced to our product range in 2024 as our entry level biogas blended product. It consists of:

- 10% low emission biogas
- 90% carbon offset natural gas

Your Scope 1 carbon emissions will be offset on your behalf under either Gold Standard (GS) or Verified Carbon Standard (VCS) certified schemes.

Why biogas is good for your business

Low carbon emissions

Burning gas from fossil fuels introduces carbon dioxide into the atmosphere that has been locked away for millions of years, this then causes climate damage, whereas biogas is produced solely from organic materials that are already present within the environment.

Accountability

The Green Gas Certification Scheme currently governs the process for all biogas certificates. The certification scheme tracks all biogas from production through to consumption. Biogas certificates will be sent to customers after the contract start date (or live date if later).

Reduces reliance on fossil fuel gas

Every unit of biogas displaces a unit of natural gas (fossil fuel) which helps reduce carbon emissions. Organic waste is continuously created and can be used to create Biogas, thus reducing our reliance on fossil fuels.

How to switch to a biogas agreement for your business

Contact Taurus <https://www.taurusutilityconsultants.co.uk/contact/> today to discuss switching your business to biogas with a 10%, 25% or 50% biogas blend or our 100% biogas product. Whilst there is a growing demand for biogas, there is currently a limited volume of biogas available in the UK. Choosing a biogas contract does attract a premium. Prices for biogas have changed considerably over the past few years as demand increases.
